Savva Kashin

Senior Fullstack Engineer · TypeScript / Node.js / React

Bangkok, Thailand · +66 91 039 5394 · yakikbutovski353@gmail.com · linkedin.com/in/savva-kashin · github.com/real-ner9 · t.me/real_ner9

SUMMARY

Fullstack engineer with 8 years building web products end to end: **Node.js**, **NestJS**, **PHP (Laravel)** and **C#** services on **PostgreSQL**, **Redis** and **RabbitMQ**, with **React**, **Vue** and **TypeScript** on the frontend. Grew from frontend developer to fullstack team lead, then took on contract architecture work. Track record in caching, queues, payments, auth and zero-downtime migrations at tens of thousands of daily users.

SKILLS

Languages: TypeScript, JavaScript, PHP, C#, Python, SQL, HTML, CSS
Backend: Node.js, NestJS, Laravel, REST, BFF, WebSocket, Webhooks, Cron, Background jobs, JWT / OAuth / OIDC / OTP
Data & messaging: PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ, BullMQ, DB migrations, Payment integrations
Frontend: React, Next.js, Vue 2/3, Angular, Lit, Web Components, Redux, Zustand, Pinia, NgRx, RxJS, WebRTC
Infra & quality: Docker, GitHub Actions, CI/CD, Azure, Jest, Vite, Webpack, Core Web Vitals
Architecture & team: C4, FSD, SSR / SPA, Team leadership, Mentoring, Code review, Claude Code

EXPERIENCE

Own project · Fullstack Developer · Telegram bot and web game · Bangkok — 2026

- Python / FastAPI backend for a Telegram bot and a web game that lets players remotely play a real claw machine; game frontend with Lottie animations (in progress)

Python · FastAPI · Telegram Bot API · TypeScript · Lottie

Teamatical · Senior Fullstack Developer (contract) · sportswear e-commerce, B2B/B2C · Bangkok — Jan 2026 – Sep 2026

- Replaced free-text pseudocode deal configuration with a structured UI and moved the C# backend to JSON with field-level validation errors: configuration **~8.5x** faster, no engineer in the loop
- Extended the Node.js BFF layer over the C# backend on Azure: built endpoints that aggregate backend data and save complex entities in one request instead of three
- Led the CRM migration from Polymer to Lit: new shell over old components, both versions live on one backend, staged rollout by department; **~95%** of legacy removed, **100%** of staff moved, zero downtime
- Rebuilt checkout for **~50** US storefronts as a **3**-step flow with server-side state: **~5–7%** more completed payments after release
- Made Claude Code the team standard: trained **5+** engineers, set up MCP servers and AI code review in CI

TypeScript · C# · Node.js · BFF · REST · Azure · Lit · Polymer · Web Components · GitHub Actions · Claude Code

Vade · Senior Fullstack Developer (contract) · CRM platform · Moscow — Sep 2025 – Jan 2026

- Brought in as architect: rewrote the early CRM from scratch on React, TypeScript and FSD for **2** teams; documented the system with C4 diagrams
- Coordinated the backend team: NestJS services on PostgreSQL with migrations, rollback and seeds, plus a PHP backend; set code standards for both teams
- Introduced a BullMQ stuck-job watchdog with retries for thousands of background jobs a day: manual fixes from **2–4** a week to **~1** a month
- Replaced manual SSH deploys with Docker and GitHub Actions (dev and prod): **~40%** faster, no manual steps

React · TypeScript · FSD · Zustand · NestJS · PHP · PostgreSQL · Redis · BullMQ · Docker · GitHub Actions

Contract project · Frontend Developer · marketplace, European client — 2025

- Multilingual SSR marketplace on Next.js: next-i18next with **4** locales, Core Web Vitals and bundle optimization

Next.js · next-i18next · SSR

European Legal Service (ELS24) · legal and telemedicine platforms · Moscow — Apr 2021 – Aug 2025

Team Lead, Fullstack — Jan 2023 – Aug 2025
Frontend Developer — Apr 2021 – Dec 2022

- Grew from frontend developer to fullstack team lead: started the company-wide CRM alone and built a team of **4** around it; all **4** juniors promoted to middle
- Dashboard **~2 s** to **<300 ms** and DB load on those queries down **~40%**: tuned PostgreSQL queries, added Redis caching for dashboards, reference data and account lists
- Moved email and push notifications to RabbitMQ with retries: lost notifications **~2–3%** to near zero, no more **3–5 s** API stalls at peaks
- Automated webhook reconciliation for **300–800** payments a day, including quotas and trials (cron): **~90%** fewer manual checks by support

- Built APIs on a Node.js layer over a Laravel backend with hand-written PostgreSQL queries for **1–3k** orders a day: JWT, OAuth/OIDC, SMS OTP
- Rebuilt video consultations on plain WebRTC with Node.js signaling: usage took off, cost dropped to hosting
- LCP **~4.8 s** to **~2.3 s** (p75, mobile), JS bundle **~1.4 MB** to **~450 KB**; builds **7 min** to **~1** (Webpack to Vite); Jest tests cut regressions **~30%**

Node.js · Laravel · Python · PostgreSQL · Redis · RabbitMQ · WebSocket · WebRTC · React · Vue · TypeScript · Jest

RITS · Frontend Developer · mining systems · Novosibirsk — Mar 2020 – Feb 2021

- Rewrote the Canvas quarry map filtering: equipment search **60 s** to **5 s** (**12x**); refactored legacy Angular / NgRx, test coverage to **80%**

Angular 8+ · TypeScript · RxJS · NgRx · Canvas · Jasmine · Karma

Freelance · Frontend Developer · remote — Aug 2018 – Feb 2020

- E-commerce storefronts end to end and dozens of landing pages; jQuery sites migrated to React and Angular SPAs; worked directly with clients
