Savva Kashin

AI-First Senior Fullstack Engineer · React / Vue 3 / TypeScript · Node.js / NestJS · Python / FastAPI

Bangkok, Thailand · +66 91 039 5394 · yakikbutovski353@gmail.com · linkedin.com/in/savva-ai-fullstack · github.com/real-ner9 · t.me/real_ner9

SUMMARY

AI-First Senior Full-Stack Engineer with **7+** years of experience building web products end to end across **LegalTech**, **iGaming**, **FinTech** and developer platforms. Worked at **EPAM** on open-source products and grew to full-stack team lead in product teams. I build full-stack applications with a strong focus on performance, reliability and clean architecture, and bring AI into both products and my daily engineering workflow.

SKILLS

AI: AI Agents, LLM agents, RAG, MCP, Claude Code, AI code review
Languages: TypeScript, JavaScript, Python, PHP, C#, SQL, HTML5, CSS3, SCSS
Frontend: React, Redux, redux-saga, Vue 3, Pinia, Lit, Polymer, Web Components, D3.js, Chart.js, Core Web Vitals, Design systems, Next.js, SSR / SPA, Angular, NgRx, RxJS, Zustand
Backend: Node.js, NestJS, Express, Python, FastAPI, Laravel, REST, BFF, WebSocket, WebRTC, JWT, OAuth 2.0/OIDC, OTP, Webhooks, Cron, Background jobs
Data & messaging: PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ, Kafka, BullMQ, DB migrations, Payment integrations
Infrastructure & quality: Docker, Kubernetes, Helm, Nginx, Microsoft Azure, GitHub Actions, GitLab CI/CD, Jenkins, Vite, Webpack, Jest, Enzyme, Playwright
Architecture & leadership: C4, FSD, Building teams from scratch, Mentoring, Code review culture

EXPERIENCE

Teamatical · Senior Fullstack Developer · Bangkok, Thailand · on-site — Nov 2025 – present

Cross-value-chain platform for factory-direct, on-demand apparel, connecting brands, manufacturers and retailers; storefronts for ~50 US clients. Worked on-site at the production factory in Thailand, bridging the software and the shop floor: aligned order and production workflows with the factory team and set up the systems that turn online orders into manufactured garments.

- Made AI agents part of the team's daily workflow: rolled out Claude Code as the team standard, ran **3–4** hands-on sessions and trained **5–10** engineers; rework complaints about AI-generated code stopped
- Built the team's agent toolchain: Context7 and Playwright MCP servers, a shared CLAUDE.md memory bank and AI code review on every GitHub PR via GitHub Actions
- Reverse-engineered the legacy free-text deal configuration and migrated it in two safe steps (structured UI over the old format, then C# backend on JSON with field-level validation): configuration **~8.5x** faster, no engineer in the loop
- Led the CRM migration from Polymer to Lit: new shell over old components, both versions live on one backend, staged rollout by department; **~95%** of legacy removed, **100%** of staff moved, zero downtime
- Rebuilt checkout for **~50** US storefronts as a **3**-step flow with server-side state: **~5–7%** more completed payments
- Extended the Node.js BFF over the C# backend on Azure: endpoints that aggregate data and save complex entities in one request instead of three

TypeScript · JavaScript · Lit · Polymer · Web Components · Node.js · C# · REST · Microsoft Azure · Claude Code · AI Agents · MCP · Playwright · GitHub Actions · CI/CD · Git

LegalShield · Team Lead, Fullstack · remote — Sep 2021 – Oct 2025

LegalTech company: subscription-based online legal consultations, 3M+ clients.
Projects: 24/7 legal support platform for small businesses (white-label for a major bank partner), online legal and customs support service for foreign trade

- Grew from middle full-stack developer to full-stack team lead: started the company-wide CRM alone and built a team of **4** around it; all **4** juniors promoted to middle
- Replaced the paid ConnectyCube SDK with in-house lawyer–client video consultations on plain WebRTC with Node.js signaling: video share of consultations grew **5×** (**~2%** to **~10%**) and kept growing; licensing costs dropped to hosting only
- Dashboard **~2 s** to **<300 ms** and DB load on those queries down **~40%**: tuned PostgreSQL queries, added Redis caching for dashboards, reference data and account lists
- Moved email and push notifications to RabbitMQ with retries: lost notifications **~2–3%** to near zero, no more **3–5 s** API stalls at peaks
- Automated webhook reconciliation for **300–800** payments a day, including quotas and trials (cron): **~90%** fewer manual checks by support
- Built subscription, billing and partner-integration APIs on a Node.js layer over a Laravel (PHP) backend with hand-written PostgreSQL queries for **1–3k** orders a day: JWT, OAuth/OIDC, SMS OTP
- Built a Python service that generates and parses legal documents (PDF/DOCX) for client consultations, processing **100+** documents a day

- LCP **~4.8 s** to **~2.3 s** (p75, mobile), JS bundle **~1.4 MB** to **~450 KB**; builds **7 min** to **~1** (Webpack to Vite); Jest tests cut regressions **~30%**

EPAM Systems · Full Stack Engineer · remote Sep 2019 – Aug 2021

Projects: ReportPortal (test reporting platform), EPAM Delivery Platform (now KubeRocketCI, CI/CD on Kubernetes), EPAM UUI (shared React UI kit used by 40+ internal products)

- Promoted from Junior to Middle in under **2** years, delivering features on **2** products and a shared UI kit.
- Built **5+** dashboard widgets in React/Redux during ReportPortal's v4 - v5 migration.
- Contributed **10+** React/TypeScript components to EPAM UUI and took part in its open-source release; optimized data tables to stay responsive on **1000+** rows.
- Built Node.js services: test-reporting agents for **3** frameworks (Jest, Mocha, WebdriverIO) and an orchestration layer between the UI and Go backend.
- Raised UI test coverage to **~70%** (Jest, Enzyme), reviewed PRs and onboarded **2** new developers in a **5**-person team.
